CONSERVATORY ROOF SPECIALIST IS SWITCHING TO ACTIS HYBRID

As solid roofs become an increasingly popular way of addressing the "too hot in summer, too cold in winter" issue for conservatory owners. Since switching to the Hybrid system, York-based Wetheralds, has received LABC Registered Details for its replacement roof system. This means their thermally efficient tiled roofs can be accepted by all LABC building control surveyors speeding up the process for homeowners.

"What really swung the deal for us, apart from its incredible thermal efficiency and ease, speed and cleanliness of installation, was the fact that we can get an entire solution from just one company". Wetheralds MD Mark Pavis explained.
