

CASE STUDY HYBRID INSULATION

ZOO

DARTMOOR

PRODUCT USED

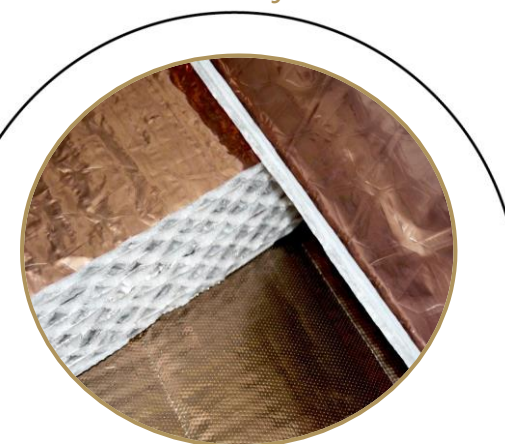

- HControl Hybrid

Zoo animals benefit from ACTIS insulation treatment

As the zoo is shortly to become a registered charity, ACTIS wanted to help it to make a considerable dent in its running costs – and the donation of 240 m² of HControl Hybrid vapour control layer with built in insulation in the walls and roof should help reduce bills in the monkey, reptile house and education centre considerably. The 9 m² monkey house is home to two Vervet monkeys, and the 90m² reptile house needs to be kept at a constant 24°C to replicate the natural habitat of its residents.

“A number of years ago I lived in France where ACTIS is based and used their products - to great effect - to insulate my house. So when we took on the zoo project I wanted to see similar costs efficiencies here as those I’d enjoyed in my home”. Benjamin Mee, zoo owner.
